1 Comments

Comments are lines parts of code that are not compiled.
This can be done as a line or as an environment.

```
1 | % This line would not show up on the compiled PDF.
```

Comment by Line

```
1 | \begin{comment}  
2 |     This line would not show up on the compiled PDF.  
3 |     This would not be in the final document either.  
4 |     Nor would this one.

4 Symbols

4.1 Degrees Symbol

The `\degree` command is provided by the `gensymb` package, so if you add:

```
\usepackage{gensymb}
```

to your preamble, that should enable the command.

Another alternative is the `\textdegree` command, which is provided by the `textcomp` package. And finally, `^\circ` is another way of obtaining roughly the right symbol.

5 Tables

Tables are Included in \LaTeX there are no packages are required to be used.

5.1 Table with no Borders

<pre> 1 \begin{center} 2 \begin{tabular}{c c c} 3 cell1 & cell2 & cell3\\ 4 cell4 & cell5 & cell6\\ 5 cell7 & cell8 & cell9\\ 6 \end{tabular} 7 \end{center} </pre>	<table border="0"> <tr><td>cell1</td><td>cell2</td><td>cell3</td></tr> <tr><td>cell4</td><td>cell5</td><td>cell6</td></tr> <tr><td>cell7</td><td>cell8</td><td>cell9</td></tr> </table>	cell1	cell2	cell3	cell4	cell5	cell6	cell7	cell8	cell9
